

Project Kit — Ship Your MVP

Stop doing work AI can do while you sleep.

Theme: Agents & Automation • Time: 3 hours

THE GOAL

A public URL of your working (or waitlist) product, and one automation running in the background.

MATERIALS

Lovable / Bolt / v0	Supabase or Airtable for data	n8n or Zapier
---------------------	-------------------------------	---------------

STEPS

01 Spec in 1 sentence

Write the one-liner your grandma would understand.

02 Build the front

Use Lovable. Hero + one core action + one CTA.

03 Wire the data

Signups → Airtable/Supabase → email confirmation.

04 Automate one thing

New signup → auto-DM you a Slack ping + adds them to a Notion tracker.

05 Ship

Get the URL. Test on your phone. Send to 5 people.

DELIVERABLE

A public URL + a screenshot of your automation firing successfully.

✓ **It works**

Can someone actually complete the core action end to end?

✓ **Speed to value**

How fast does a new visitor 'get it'?

✓ **Automation**

Does the backend automation save you real time?

✓ **Founder polish**

Would you send this link to your hero?

Lovable spec prompt

Build a web app called [NAME]. One-liner: [PITCH]. Primary user flow: 1) Land on hero → 2) [ACTION] → 3) [OUTCOME]. Design system: dark mode, mint green accents, Space Grotesk font, generous whitespace. Store data in Supabase table called [TABLE_NAME]. Add a landing page above the app with headline, subheadline, and one CTA button.
